Hybrid *mearnsi* X *caniceps* individuals have been recognized previously. Miller (Condor 41:211-214, 1939) describes such breeding specimens from isolated sections of the Wasatch Mountains in Utah and scattered ranges in southern Wyoming. Similar hybrids have been collected in the Flagstaff, Arizona, area in winter (specimens deposited at the Museum of Vertebrate Zoology, G.F. Barrowclough pers. comm.). However, east of the Continental Divide in Colorado, *Junco* hybrids of this combination are relatively rare.

This paper benefited from comments and assistance provided by George F. Barrowclough, Eugene Eisenmann and Ned K. Johnson.

*Accepted 30 December 1980*
